## Jinan Office Towers

### Project information

The new building complex comprises two offset office towers of different heights and connecting building blocks, also of different heights, enclosing a green inner courtyard which provides access to all parts of the building. The entire building is raised up, allowing visitors to “flow through” into an atrium, thereby creating a public urban space. In its form, the complex responds to the neighbouring high-rise buildings and the gaps between them. The ground floor zone in the complex provides commercial units and plenty of open space to be used for relaxation or for simply traversing the area. Everything should be completed by 2020.
